

Backend Developer Onboarding Guide

Environment Setup

1. Install Node.js version 18 or above from nodejs.org
2. Install Git from git-scm.com
3. Clone the backend repository using `git clone`
4. Run `npm install` to install all dependencies
5. Copy `.env.example` to `.env` and fill in the values
6. Run `npm run dev` to start the local server on port 3000

API Standards

All endpoints must follow REST conventions

Use camelCase for JSON keys

Always return proper HTTP status codes

Add JSDoc comments for every function

Database Setup

We use PostgreSQL as primary database

Run migrations using `npm run migrate`

Never modify migration files directly
